

## An all-around solution for your payroll needs

When it comes to running a business, you need time to focus on the things that can make it successful. While you're more than happy to offer employees a way to save for the future, some of the administrative tasks that go along with operating a retirement plan—particularly those related to payroll processing—can demand a lot of attention.

Payroll 360 can help reduce your administrative burden and some of the risks associated with manual payroll processing.

Payroll 360 seamlessly integrates retirement recordkeeping information with the payroll system that works with your plan. When employees make changes related to savings rates and loans on the employee website, the data will be transmitted directly to your payroll company. The changes will then be automatically made for the employee within the payroll system's records.

## Everyone benefits from Payroll 360

Payroll 360 can eliminate the need for you to manually submit changes to your employees' retirement plan accounts regarding savings updates and loans (if applicable). It can also provide the following benefits:

### More time

With Payroll 360, you won't have to monitor for daily reports or emails in order to process employee changes or transactions that impact your payroll.

### Reduced risk

Since Payroll 360 provides seamless data transmissions between your recordkeeper and your payroll company, you no longer need to worry about missing or incorrectly processing employee requests.

### Peace of mind

Payroll 360 ensures that the actions taken by employees on the employee website are executed in an accurate and timely manner.

Please keep in mind that Payroll 360 won't replace the need for you to approve certain participant transactions, nor will it relieve you of your normal fiduciary responsibilities regarding the plan and its participants. However, it will allow you to focus on other areas of your business by removing some of the more repetitive and time-consuming administrative tasks from your day.
